OpenSpirit Steps Up Regional Training and Support for Canadian Clients

Alliance with Calgary-based GEOSEIS Ensures Rapid, Localized Support and Personal Attention

SUGAR LAND, TEXAS – February 21, 2006 – OpenSpirit Corporation and GEOSEIS Inc. are joining forces to help Canadian-based clients achieve rapid implementation and uptake of the OpenSpirit application and data management solutions. The two companies have signed an International Reseller and Service Provider Agreement to establish GEOSEIS as the preferred OpenSpirit software support, training and services center for all Canadian OpenSpirit clients.

“With its growing presence in Canada’s upstream E&P market, OpenSpirit recognizes the importance of local advice and support to assist clients in effective implementation and maximum utilization of OpenSpirit technology,” says Dave Birnie, President of GEOSEIS. “GEOSEIS is using the OpenSpirit solution within our own business, so we are very familiar with OpenSpirit’s reputation for first-rate global customer support. We are pleased to be selected as the trusted connection to their Canadian clients.”

Through this alliance GEOSEIS will provide support to Canadian users of OpenSpirit-licensed products. In addition, GEOSEIS will be a reseller of OpenSpirit products in the Canadian marketplace. This will include pre-sales evaluations, training, and work flow assistance and development. Jake Doruiter, Manager of Data and Technology Integration Services, is the leader of GEOSEIS’s team supporting clients wishing to leverage OpenSpirit products and applications in their businesses. GEOSEIS has initially committed two people to this venture with additional resources to be added as OpenSpirit-related activity grows.

OpenSpirit provides *infinite integration* – helping clients manage and access upstream data and streamline work flows by giving their applications and data stores the flexibility and power to create, read, update and delete data from anywhere within their network. OpenSpirit offers more than 40 plug-ins for applications from over 30 developers, as well as a dozen data stores.

GEOSEIS currently offers services to clients in the areas of data and technology integration, seismic data and application support, geological and geophysical interpretation, geomatics and mapping, and divestiture and farmout data rooms.

“Our clients have asked us to provide a ‘regional Calgary connection’ for their training and support needs,” says Dan Piette, President and CEO of OpenSpirit. “GEOSEIS is recognized for their integrity, quick response, and ability to provide necessary resources and expert guidance. Dave, Jake and the rest of the GEOSEIS team are an integral part of our client support strategy.”

A joint OpenSpirit-GEOSEIS training course for OpenSpirit clients has been scheduled in Calgary in March 2006.

About GEOSEIS

GEOSEIS Inc. is an E&P Technology Service Company specializing in the delivery of computer-based applications together with associated data preparation and support services. GEOSEIS gathers, organizes and prepares geoscience, production and engineering data to support E&P projects. GEOSEIS leverages information technology software products and work flows to solve business problems and data issues on behalf of clients. GEOSEIS also specializes in geological and geophysical data interpretation and mapping as well as divestiture and farmout data rooms.

GEOSEIS Inc., based in Calgary, Canada started up in September 1997 and now operates with a staff of 21. Additional information on GEOSEIS and services offered is available at www.geoseis.ca, or via e-mail at jdorruiter@geoseis.ca.

About OpenSpirit

The OpenSpirit Corporation, based in Sugar Land, Texas, began operations in July 2000 as an independent software company focused on providing integration solutions for upstream applications and data. The OpenSpirit application integration framework allows interoperability between multiple vendors' applications and data. To date, more than 30 software vendors have licensed the OpenSpirit developer's kit. Additionally, there are now more than 1500 oil company end users in more than 50 countries taking advantage of the framework to speed up critical work flows and enhance analysis in the geotechnical space, with more adopting the solution every day. Additional information on OpenSpirit is available at www.openspirit.com, or via e-mail at info@openspirit.com.
